

Features & Benefits

- Universal ac input voltage(120-277VAC)
- Linear form factor, metal sheet case(white), side feed
- Isolated 0-10v dimming interface, dim down to true 1.4ma
- Low standby power: <0.7W@120VAC
- Suitable for indoor use
- Flicker free, excellent camera compatibility, spec-grade smoothness
- USB programmable feature:
 - Output current, dim to off, min dimming level
 - Otp point of driver, led module thermal protection, luminous decay compensation,
 - End-of-life indicator, fade in time, over load protection point
- Dimming curve: Log/linear/square dim curves
- Class2, Class P
- Comply with IEEE1789, UL8750

Programming

User can program the driver via terminal block.

- Output current(1mA Step)
- Dim to off
- Min Dimming Level
- OTP point of driver
- LED module thermal protection
- Luminous decay compensation
- End-of-life indicator
- Fade in time
- Over load protection point
- Dimming curve: Log/linear/square

Interface- Terminal block	The terminal block can recognize the type of input signal, analog or digital. So the driver can be easily connected to a digital control system, or can be connected to an external NTC / rheostat / current selection switch to set the driver(eg: output current , dimming curve, and so on).

0~10V or Resistor Dimming

The 0~10V or resistor dimming can be used to dim the output Current via a standard commercial wall dimmer (0~10V_{DC}) or an external control voltage source (0~10V_{DC}) or external resistor.

LED Thermal Protection (NTC) Characteristic

The LED thermal protection feature of the driver helps reduce the temperature of the LED module by reducing dual output current together in case of abnormal temperature conditions.

In the end application, care must be taken to place the NTC thermistor close to the hottest spot on the LED module.

If LED thermal protection is not required the NTC port on the LED power supply connector can be left open.
